

# Advanced Digital Asset Execution Services

In traditional finance, algorithmic execution services are highly advanced. We're bringing this level of sophistication and expertise to digital assets.

In today's digital asset landscape, speed, efficiency and modern technology are absolutely vital. Without these, participants will find it overwhelming to keep up with the many nuances in these rapidly changing and evolving markets. Failure to build algos with these capabilities can eat into profits – yet many firms lack the intentional focus to model market micro-structure.

That's where we come in. Supported by a combination of high-performance technology and highly engaged client service, our digital asset algos are built to serve the institutional community.

## Our Algos Are...

### High-Tech

- ✓ High-performance, high-priority algorithms available out of the box – VWAP, TWAP and Implementation Shortfall (IS)
- ✓ Advanced logic that accounts for market impact and liquidity ramifications, protecting your bottom line
- ✓ Ultra-low-latency infrastructure, collocated in the same trading venue datacenter where we execute trades

### High-Touch

- ✓ Built by a combination of veteran traders and seasoned technologists, creating the right mix of quantitative rigor and functionality
- ✓ Ability to collaborate with us to create new algos for your unique strategies and requirements, maximizing speed while reducing costs
- ✓ Guidance from our expert team members, who stand ready to consult, provide recommendations and take feedback to inform future enhancements

→ **The result:** speed, efficiency and cost savings

“Leveraging VersiFi’s execution algos has been faster, easier, and cheaper than building out our own and has provided significant cost savings for our fund by improving order execution. The VersiFi team has been amazing in adjusting and customizing their execution algorithms to conform to our specific use case, which is a big improvement over existing, off-the-shelf solutions.”

Vasily Andreev , CEO — Temple Capital

## Watch This Space

While our algos are what we can deliver today, integrating seamlessly with our clients' exchange access APIs, we are actively laying a foundation for meeting the broader digital asset trading and lending needs of financial institutions.

### The Future of VersiFi

Allowing access to our algos via VersiFi's own execution venue connectivity, with no need to create individual sub-accounts

Advancing our plug-and-trade platform, with a full suite of liquidity, order routing, lending and portfolio management capabilities

Building new innovations to support institutional adoption of digital assets and help build a foundation for the regulated future of this industry

## Partner with Us

Our team is invested in your trading success. Partner with us to learn more about why the right combination of powerful technology and high-touch services is vital to powering algorithmic trading.

Compare our algos head-to-head with what you are using today and we're confident you'll see the difference.
